

产品特点：
Products Feature

- 1 The core components are widely adopted the imported technology from England, Italy, U.S. All the main components are using the first-class brand at home and abroad.
- 2 The hydraulic cylinders use leakproof structure style which is our independent designed patent. It can drastically improve the products' reliability and stability.
- 3 More than 80% material use the high strength steel sheet (LG600XT, yield strength 650MPa). The structure is lighter and the strength is higher.
- 4 Bigger adjustment angle. It's more adapt to different road situation and working condition;
- 5 Less welded parts. The lifting arm structure is cut from the one-piece entity plank. It can make the structure strength and reliability stronger.
- 6 Further optimizing the hydraulic system, control system. The pipeline, circuit and connection are with integrated technology. The systems are simpler, more stable, more convenient to installation and maintenance.
